Industrial Drying and Curing Ovens

Ovens ensure that moisture is thoroughly removed from a part before it is painted, powder coated or finished

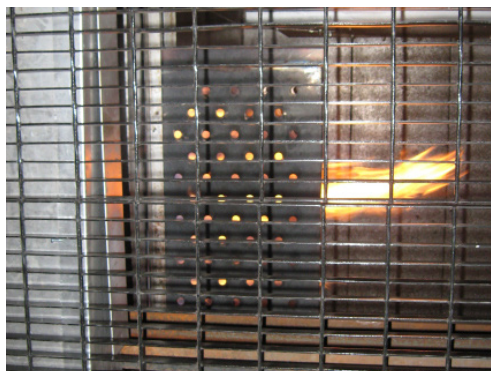

Cincinnati Industrial Machinery (CIM) offers a full line of drying and curing ovens for your finishing system needs. Requirements can vary greatly based on application, size of facility, materials being finished and a number of additional factors. All ovens are custom designed and built using our extensive engineering and project management experience to the exact specification of the customer.

Industrial Drying Ovens

Drying ovens are the most effective way to remove moisture on products for painting or other finishing applications. CIM's drying ovens are high quality and low noise. We offer a range of cabinet sizes built custom for your needs as well as temperature capabilities to meet every application.

Industrial Curing Ovens

Curing ovens are designed to cause a chemical reaction in a substance once a specific temperature is reached. Curing ovens are often used in the powder coating process to improve the cured film quality and accelerate the line speed. CIM will custom build your benchtop, cabinet, walk-in, or conveyor oven to meet your application needs. Our ovens have fast ramping and cool down rates for maximum efficiency as well as short cycle times.
