

CINCINNATI

Finishing Systems Rebuilds

Minimize lost production time

Cincinnati Industrial Machinery (CIM) has been building and servicing industrial washers for decades, but, over time many components become worn out due to age, or outdated because of new technology. Rebuilding a section of your industrial washer provides the latest technology and safety features while providing a cost effective solution to replacing the entire washing system. Avoid costly, unscheduled maintenance shut downs by having the rebuild, repair, or upgrade performed during scheduled downtime.

**ARMOR
AFTERMARKET**

Armor Aftermarket, the post-sales division of CIM, provides OEM replacement parts, planned maintenance, and service repairs and has years of experience rebuilding and refurbishing both CIM and finishing systems manufactured by competitors. Refurbishing your existing finishing line maximizes efficiency and improves safety. Rebuilding your finishing system corrects problems with many systems, including:

- Tanks
- Housings
- Spray Risers
- Cure Oven
- Wash Tank
- Headers
- Nozzles
- Pumps
- Conveyors
- Drive units
- Dryer/oven panels
- Exhausts
- Gas Burners
- Infrared burners
- Gas trains
- Electrical controls
- Control panels
- Convection type cure ovens
- Supply fans
- Cooling tunnels
- Ice blast cleaning
- Pump to motor laser alignment
